A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/20/04 has been entered.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-27 and 29-31 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is no description in the disclosure as originally filed of "the p-doped or n-doped inner area having a same doping concentration as the starting semiconductor substrate".

In view of applicant's argument in the amendment filed 6/16/05, figure 1 is seen to show implantation using a higher dose than that used in figure 2 (the drawings filed with the amendment filed 10/20/04). Although there is not now seen a discrepancy between the figures the figures are not seen to depict no change in the doping level for any of the implantation energies. As noted by applicant, the lowest value on the vertical axis is not zero but is instead greater than zero as is the lowest value on the vertical

axes of figures 2A-2C of Goo. Therefor, all of the pointed to drawings show some of the implanted ions residing at the surface of the substrate.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See Goo at Figures 2A-2C which results from an energy of several electron volts (col.4) and the disclosure at column 5 that the implant does not adversely affect device properties. See Odanaka at figures 2a-2d and claim 5. See Seliskar et al at figure 4 and col.3 wherein options related to mask material, ion, dose and energy are disclosed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

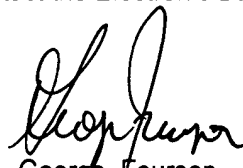

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
